For 40 years I enjoyed chasing the wind. I had the pleasure of both racing and just cruising 30 to 65 foot sail boats on both coasts and in the Great Lakes. The feeling of holding the wheel of a good sized sail boat is so special it is almost impossible to describe. I do miss it. (The Kanawha River just isn’t the same as Long Island Sound or the Santa Barbara Channel Islands).

Knowing the direction of the wind precisely enough to get the most lift from the wind on every leg, every course…and that is something one takes a lifetime to learn. Some never achieve it. I don’t think that I have yet, but maybe someday.

Not being able to see the wind, one has to feel it. You can see the currents, even the tides and certainly the next marker buoy. But you must stay so alert, because the wind can shift…sometimes dramatically so there is no doubt…and sometimes so subtly that you catch the change too late, miss it and lose on your reach for the mark and you must quickly develop a recovery strategy.

So you take stock of where you are, and plot a new course…one that may compromise your original plan, but hopefully will recover a credible position. Sometimes you are too far off course, and must live with a sad finish.

Lobbying is like that.

In sail boat races, we pit ourselves against other boats who want to race the same course, will deal with the same wind and sea, and hope to beat you from the start to the finish.

But we only shout at each other…from boat to boat…and when a collision is possible. Otherwise, all is quiet save for the calm, but often screaming orders of the helmsman who is expected to be taking all factors into account as best he can.
Remember Buffalo Creek
Buffalo Creek Day at the Capitol
Monday, February 27, 2006

Governor's Press Conference Room ~ (Sec. of State's office)

See the films. Support the Sludge Safety Bill.

12:00 noon ~ 4:00 p.m.

Buffalo Creek Day at the State Capitol will be held this Monday - February 27th. In remembrance of the Buffalo Creek disaster, and as a reminder of the ever pending possibility of just such another - the Sludge Safety Project (SSP) will hold Buffalo Creek Day in the governor's press conference room - located in the Secretary of State's office - anytime between 12:00 noon until 4:00 pm.

Legislators are invited to attend and see clips of:

“Buffalo Creek – An Act of Man”
and
“Buffalo Creek Revisited”

SSP members whose health and safety suffers because of coal sludge impoundments and coal slurry injection will be present to speak with the public and legislators.

For more information: Call Abe Mwaura, (304) 522-0246

Under the Dome ... cont. from pg. 1

legislation for a couple of years, and this is our first effort to promote the concept. We don’t expect the bill to move this year, but it is getting a lot of attention.

On the other hand, SB 153 would require a “jobs impact assessment” on any bill the legislature considers. This is a concept that the Chamber of Commerce has been supporting for many years as a method of thwarting the passage of any new industry regulation. We are watching this one. Enough said.

SB 278 and HB 4336 are also Chamber of Commerce bills that would create an “energy czar” within the Governor’s office primarily to promote the traditional fossil fuel industries in the state.

In contrast, Senator John Unger has introduced SB 567, which would create a Division of Energy within the Department of Commerce. This new DOE (many of you may remember the old DOE, and even the name causes me to shudder) would be charged with developing a comprehensive energy plan for the state.

Unlike the Chamber’s proposal, Senator Unger’s bill mandates the development of a renewable energy component in any state energy plan, including establishing an actual “Renewable Energy Portfolio.” Of course, the devil is always in the details, so we are actively participating in the discussions on this bill. Funding for this idea seems to be a major roadblock at this time.

This was the last week for bills to be introduced, and some new ones have popped up out of the blue.

HB 4723 would place a 5-cent tax on each bottle of water sold in the state, “to benefit West Virginia University Institute of Technology, the Public Employees Insurance Agency, Marshall University and West Virginia University.” Amazing. Wonder if this bill’s sponsors support the Bottle Bill?

HB 4697 is a reincarnation of a bill that the Governor vetoed last year that attempted to pack the DEP Advisory Council. This new version comes from the Farm Bureau and increases the membership of the Advisory Council by adding one member from the agricultural community.

That’s not a bad idea in itself, but the bill also contains language that would allow the council to “upon majority vote of the members, offer suggestions to the secretary for proposed new or amended legislative rules.” This is simply industry’s attempt to turn the Advisory Council into the rulemaking arm of the DEP. As long as this language remains in the bill, WVEC cannot support it.

And finally, hanging over our heads like the sword of Damacles, is HB 3343, a carryover bill from last session that would change state law by inserting the federal definition of “fill material” into state statute. Even worse, this bill would change the state law that currently forbids waste materials “extracted” during mining operations from being dumped into state waters and streams.

In effect, HB 3343 would give the state’s official blessing to mountaintop removal mining, huge valley fills, and the burial of hundreds of miles of pristine West Virginia streams.

This bill has not been taken up the House Judiciary Committee. I am hoping beyond hope that it doesn’t see the light of day.

If you want to view a fabulous light show, keep your bird feeders full so you can watch the gold finches morphing into their bright spring colors.

Blowing In The Wind ... cont. from pg. 1

And no one on shore can yell at us because we are out of earshot. Even our supporters, who might have had different strategies and tacks at the starting line, or would have gone higher on the mark and then come down on it rather than shooting a close reach as we did….they are out of earshot.

Lobbying isn’t like that.

This week we raced against the big boats from AEP, King Coal, and against a formidable skipper, Captain DF and crew. We tacked, we changed sails, we shifted ballast….we ran a good race. It isn’t over as I write this, but the big boat is ahead of us on it’s way to the finish.

Of course, we are in more than one race at the same time. Several in fact. Some we didn’t know until after the starting gun went off, and our “shore friends” hadn’t even told us about the race.

And it was the shouting from shore that became bothersome…even totally 180 degree opposite demands for strategies and courses in the same race that yelled at our captain from the distance….as if their course was the only one worth considering.

Sailing through the rough and unpredictable waters of the legislature requires careful thought and at times very quick analysis of the currents, the tides of opinion and rhetoric, the facts of position, compass, and what is really in the wind. And we are not always right on course and often get the wind taken right out of our sails.

Other times, we can fly a spinnaker and lead the pack to the finish…but not often enough.

Choices will always require compromise. Success comes rarely enough, but it comes by finding the right course and common ground…(well, not ground in sailing).

Capturing the wind is not possible. Taking it for a brief time to send you forward to cleaner air is the key. As I have many a time in a fog shrouded race at sea, our efforts to achieve clean renewable energy for all of us will require a course that, with the sun, and the wind, we can emerge out of the smog.

But it will require reason…and less shouting.
Green Legislative Update

'My Prius'

It Is Easy To Be Green!

By Dave Bassage
WVDEP Innovation Administrator, Walton, WV.

Greenies, techies, and cheapies. Those are the loose terms I’ve coined to describe the three general categories of people who are attracted to hybrids. Some like the environmental benefits, others are fascinated by the technology, and many folks just want to save at the pump.

Most hybrid owners, of course, have a bit of all three characteristics.

I bought my 2004 Prius just ten days after the new model hit the showrooms. My primary motivations were environmental, wanting to minimize my personal environmental footprint and set a positive example for other drivers, but the technology is certainly fun and it’s great to not even notice when gas prices rise.

Over two years and nearly 70,000 miles later I’m just as thrilled as I was in October, 2003 to be driving my Prius every day. I know I put out only ten percent of the pollutants of a normal car, that my Prius includes plastic made from sugar cane, and that it’s designed to be easily recycled at the end of its usable lifespan.

I also love the way it handles on slick roads, where I feel safer in the Prius than in my Tacoma 4x4. The hatchback style and seats that fold flat lets me slide my favorite kayak inside for whitewater weekends, or lay out my camping pad in the car to convert my transportation into ‘hotel Prius’.

In response to the widespread myth that hybrid cars cannot achieve their EPA fuel economy numbers, a group of us who met online converged near Pittsburgh one weekend last summer to see just what the Prius was capable of if driven for an entire tank using the most fuel efficient techniques. We exceeded even our own highest expectations, averaging 110 miles per gallon over the 1,397 miles it took to run the tank dry, exactly double the EPA estimate of 55 mpg. HBO covered the event, and plan to include it in a climate change special to air near Earth Day this Spring.

I don’t get 110 mpg in my daily driving of course. My best tank to date was 71 mpg, and I generally get in the low to mid sixties in the Summer, low to mid fifties in the Winter. By slowing down a bit and focusing on fuel economy rather than speed, I find I arrive where I’m going in a much more relaxed state of mind, which only goes to show that maybe Kermit the Frog was wrong:

It is easy to be green!

Anti-Wilderness Resolution

Sent to Sub-Committee

Senate Natural Resources Committee had on its agenda again this week SCR 13, a really, really, really bad resolution that urged the U.S. Forest Service not to propose any new wilderness areas in the Monongahela National Forest.

Thankfully, through lots of pressure from phone calls and e-mail messages placed by our members - and especially members of the coalition of groups that comprise the WV Wilderness Coalition, committee chairman Senator John Pat Fanning moved this ridiculous resolution to a sub-committee.

Hopefully, that’s the last we will hear about SCR 13.

But don’t hold your breath.

Thanks also to the 20 or 25 folks who showed up for the committee meeting – which was cancelled, due in large part to your participation.
Bill Would Establish New Division Of Energy

(excerpted from 'The Associated Press', Wednesday, February, 15, 2006 - Charleston, WV)

Existing state programs that deal with energy policy would be merged into a new Division of Energy under a bill a Senate committee approved on Tuesday.

The new division in the Department of Commerce would streamline existing bureaucracy, not create a new one, and position West Virginia to take advantage of the new national interest in energy independence, said Sen. John Unger, D-Berkeley, chairman of the Senate Transportation and Infrastructure Committee.

A federal energy bill signed by President Bush in August gives tax breaks of $14.5 billion over 10 years for energy companies, renewable energy sources and promotion of efficiency. It gives loan guarantees and other subsidies for clean energy technologies and establishes a $1.8 billion program to promote clean coal research and development.

Unger said West Virginia has the natural resources to become a leader in those areas.

And focusing on new energy technology would create jobs and encourage children to pursue math and science so they can get those jobs, Unger said.

The changes “would send a strong message West Virginia is open for business for energy and we are connected to the world,” Unger said.

His committee originated the bill and sent it to the Senate Finance Committee on a voice vote. It does not yet have a bill number.

The new division would assume authority over state energy policy and development, which the Development Office now oversees. The Office of Coalfield Community Development and energy efficiency program also would move from the Development Office to the division.

The West Virginia Public Energy Authority would continue in its current form, run by a seven-member board. But the Division of Energy’s new executive director would manage its day-to-day operations.

The governor would appoint the division’s director, with the consent of the Senate.

The Public Energy Authority would be required to develop a five-year state energy policy by Dec. 1 and then regularly update it.

The authority also would have to submit an annual energy development plan, including proposed legislation, to the governor and Legislature by Dec. 1 each year. The plan would be developed in coordination with the Department of Environmental Protection and Public Service Commission.

Gov. Joe Manchin supports the bill, said Brian Helmick, deputy commerce secretary.

The Division of Energy director would be the point person for companies interested in expanding their energy business or starting a new one so they don’t have to go to several offices, Helmick said.

Still, the streamlined system would not necessarily speed up permitting for projects like new power plants, Helmick said.

Allan Tweddle, a member of the Public Energy Authority, said the authority also welcomes the change.

The authority already is working on a state energy policy.

“It’s terrific we are going to have this kind of support,” Tweddle said.

Under the bill, the authority’s long-range and annual plans must address efficiency, new energy sources, energy self-sufficiency, water as a resource and component of energy production, energy distribution systems, siting of energy facilities, energy infrastructure and the development of advanced energy products that can be marketed.

“There’s a lot going on in this whole field of energy around the country, around the world. Katrina gave it a big push,” Tweddle said.

The state plans would help individuals as well as businesses, he said.

For example, 41 other states authorize “net metering,” which allows homeowners who have solar panels or wind-power mechanisms and generate more power than they can use to sell that unused power to utilities. Their power meters run backward, Tweddle said.

Some new manufacturing plants are net energy producers, he said.

Net metering, tax breaks and tax credits could encourage homeowners to install energy-generating equipment, Tweddle said.

Although it can cost up to $30,000 to put solar panels on the roof of a modern suburban-style home, those systems are becoming better deals as the price of oil and gas rises. It used to take up to 25 years for solar panel systems to pay for themselves. Now it takes as little as nine years.

“Imagine the jobs you’d create putting solar panels on every house in West Virginia,” Tweddle said.
Fate of Clean Elections Uncertain  
By Julie Archer, WVEC Lobbyist / WV-CAG

Although by most accounts the WV Public Campaign Financing Act (SB124) appears dead for this session, we are still holding out hope that the bill will be taken up and voted on by the Senate Finance Committee. The bill was on the committee’s agenda Thursday morning so members could hear testimony from Todd Lang, the executive director of the Citizens Clean Elections Commission in Arizona, one of the nation’s pioneering Clean Elections state’s.

Todd’s appearance before the committee was a boost to our efforts, as he spoke about the success and popularity of Clean Elections in Arizona, and we are extremely grateful to the Reform Institute for arranging and sponsoring Todd’s visit to West Virginia. We are also grateful to Senator Brooks McCabe, who encouraged Senate Finance Chairman Walt Helmick to allow time on the agenda and to Senator Helmick for granting the request.

We were disappointed, however, that there was no discussion of the West Virginia legislation, which in many ways mirrors Arizona, and that the bill was not put to a vote. We believe we have the votes to advance the bill, although as in Senate Judiciary, we expect it to be close. Even Senator Helmick acknowledged that Todd’s presentation “may have answered many critic’s questions,” adding to our frustration that further discussion was not allowed. Helmick also told the Associated Press, “I think next year is the year that campaign finance will be looked at very strongly.”

If the bill is dead we’ll most certainly return to the legislature with a proposal next year, but there is still time this session to advance SB 124 ahead of the deadline for bills to be out of committee in the house of origin.

Buffalo Creek Day at the Capitol
Monday, February 27, 2006
Governor’s Press Conference Room ~
(Secretary of State’s office)
12:00 noon ~ 4:00 p.m.

See the films. Support the Sludge Safety Bill.

“They came in here and stole our land, killed a hundred thousand miners, polluted our streams, ground our roads into dust with their coal trucks, and they have the nerve to tell us that they should be able to destroy our mountains because they have created jobs. Well, the Mafia creates jobs, the Colombian drug cartel creates jobs and pimps create jobs.”

Denise Giardina

The Sludge Report  
By Ted Boettner, WVEC Lobbyist

As many of you know, the sludge safety bill (HB 4583) was introduced last week in the House of Delegates and sent to the judiciary committee upon introduction. However, after this week any pending bills have to move out of committee(s) if it’s going to be voted upon in the house or senate.

The sludge lobby team met with House Judiciary Chairman Jon Amores to discuss putting HB 4583 on the agenda or scheduling a public hearing. Amores said he would not consider putting the bill on the agenda, or schedule a public hearing, but agreed to move forth with a study resolution on banning sludge impoundments and injection and the alternatives that exist.

On Thursday, Senator Jon Hunter introduced a study resolution (SCR-49) that would study sludge impoundments and mining subsidence. The good news is that both of these resolutions can move out of committee and onto each floor anytime before the legislative session ends.

Before the legislative session ends on March 11th, the sludge lobby team will work toward getting both resolutions passed. In all likelihood, they will combine each of these resolutions into one study before passing them in both houses.

On Monday, Feb. 27th the Sludge Safety Project will host a “Remember Buffalo Creek Day” from noon to 4 p.m. in the Governor’s press conference room. The event will clips from two Appalshop films – Buffalo Creek and Buffalo Creek Revisited – and give legislators and the public a chance to talk with people whose lives are affected by coal waste impoundments.

During the afternoon, coal field residents will meet with legislators about supporting the Sludge Safety Bill. Please come and show your support for this important piece of legislation and listen to the stories of why banning coal sludge is important to all of us.
Wind Power and the Legislature
By Donald S. Garvin, Jr.,
WVEC Legislative Coordinator

This week Senator Jon Hunter introduced legislation, SB 665, which would basically put a moratorium on the construction of wind farm projects in West Virginia until the Public Service Commission develops more comprehensive regulations regarding their construction.

These large corporate wind farms have become a divisive issue within the environmental community. Many of our members support them; many of our members oppose them. Almost everyone has strong emotional feelings about the issue.

At this time the WVEC board of directors has not established a position on this issue. While we have taken a position in our Renewable Energy Campaign to support smaller technologies such as “personal” wind power units for individual homes and small businesses, we have not developed a position regarding large corporate wind farms.

Therefore, until the board develops a policy position, the WVEC lobby team will not be lobbying for or against SB 665.

Coal and John McCain

So you liberal thinkers out there have been thinking John McCain is progressive. Well, consider the following.

The U.S. Congress is about to consider S.1003, sponsored by Senator John McCain (R-AZ), a bill that will permanently displace indigenous Navajo families of Big Mountain and surrounding communities on Black Mesa from their ancestral lands in Arizona so that Peabody Coal, the world’s largest coal company, can expand its strip mining of coal on American Indian lands.

S.1003 will relieve the federal government of any further responsibility for the relocated people, and draw down a high-quality residential aquifer in the process.

Now would be a good time to contact West Virginia’s Senators Byrd and Rockefeller in opposition to this new land grab of Native American lands.

You can get more information at the following Internet link:

Bottle Bill Hits Special Interest Wall
By Linda Frame, WV-Citizen Action Group
linda@wvcag.org

Despite a promising start, SB 136, the WV Container Recycling and Litter Control Act has gone where most progressive legislation appears to end up - Study Resolution Land. While having the bill get closer scrutiny is certainly our goal, we were in this same position last year with the promise of a study that never came.

Your support on the Bottle Bill has been tremendous as well as inspiring and without it, our lobbying would have been impossible. Going against the likes of the beer and softdrink industry, which apparently has money to burn (have you checked out those Budweiser commercials lately? Remember Spuds McKenzie?) is a daunting challenge. When people ask me, “What’s the hold up in getting this bill passed?” I can only answer that we are blocked by enormous greed and self-interest so strong that it blocks this legislation from even a serious look, let alone passage. We never thought it would be easy but to have a Senator look me in the eye and tell me that he really doesn’t see many soda and beer cans on the roadways in his district, one has to wonder if power and greed can also make you blind. After bemoaning this to one of my favorite people and who just so happens to live in a bottle bill state, he simply replied, “You are going up against tremendous greed.”

So it goes. We are going to work hard to get the Bottle Bill studied during the interims. We have to continue to play a game for which someone else makes the rules, and usually we don’t even get to see a copy. We can take pride though, that this year we got further than ever before with the help of some forward-looking legislators, legislative staff and our wonderful members, who, even though we ask them over and over, still make those calls and help us with this fight.

Last week I forgot to thank a couple of folks who made Deposit Day possible: Navneet and Noreen Bhullar who made the trek from Princeton for the third year in a row, and Abram Racin who was among the WVU students who brought over 26,000 cans to the Capitol.

Thanks!

----

**February 27:** Buffalo Creek Day at the State Capitol. Anytime between noon and 4 p.m. Join members of the Sludge Safety Project (SSP) in the Governor's press conference room, in the Secretary of State's office. Legislators will be invited to attend and see clips of “Buffalo Creek – An Act of Man” and “Buffalo Creek Revisited.” SSP members whose health and safety suffers because of coal sludge impoundments and coal slurry injection will be present to speak with the public and legislators.  
**For more information,** call Abe Mwaura - (304) 522-0246.

**March 11:**  
- **Regular Legislative Session ends.**
- **March 11, 2006: 7 p.m.** West Virginia premiere of “Black Diamonds - Mountaintop removal and the fight for coalfield justice.” The film screens at the LaBelle Theatre/Museum, 311 D Street, South Charleston. Documentary charts the escalating drama in Appalachia over the alarming increase in large mountaintop removal coal mining. Filmmakers Catherine and Ann Pancake were born and raised in West Virginia. Catherine has become an award-winning filmmaker and Ann is an award-winning author. Working for more than 4 years on this project, they have traveled throughout Appalachia to chronicle the unparalleled destruction. See www.blackdiamondsmovie.com and www.geocities.com/scmuseum. Admission is a $2.00 donation to the museum.

**March 22:** Cultural Heritage Lecture Series: William C. Blizzard discusses his book, "When Miners March". Begins at 7 p.m. at the Cultural Center (on the state Capitol Grounds). Presented by the WV Division of Culture & History.

**March 25:** WVEC Board of Directors Meeting. 11:00 a.m. ~ 3:00 p.m. **Location to be announced.** All WVEC members are welcome.  
**For more information:** WVEC office (304) 346-5905.

**April 22:** OVEC's Annual Meeting & Spaghetti Dinner (Fund-Raiser). St. Cloud Commons, 17th Street West, Huntington. Begins at 5 p.m.  
Suggested donation: $5.00  
**For more information:** Call OVEC office, (304) 522-0246.
